

Group CBT in adolescents: a paywalled cohort study
Karin Muller. Example Review Quarterly 2021;7:44-52.
doi:10.1000/paywalled.2021.044

SYNTHETIC TEST FIXTURE - not a real paper. Generated for the deep-research evaluation harness (tests/fixtures). No copyrighted content is included.

Methods: fifty adolescents received group cognitive behavioural therapy.

Results: symptom scores decreased in both arms; no between-group difference.

Conclusion: this file exists only to exercise pdftotext and the inbox loop.
